

Dividend Forecasts for 25,000+ securities globally

Comprehensive, accurate dividend
forecast data for equity shares and ETFs

Algorithm+Analyst: 100+ countries 1000+ indices

Our forecasts predict when and how much 25,000+ securities will pay out in dividends during the coming two full fiscal years.

These forecasts are valuable for activities including stock selection, income planning, option pricing and dividend capture.

Algorithmically calculated and manually analysed, we work from a huge database of corporate actions to build up patterns and forecast with a high level of accuracy.

The data can be accessed via API, via a regular push in flat-file format, or via direct login.

We are a technology business serving finance industry clients globally from our offices in London and Vancouver.
