## Service Overview

The Derivative Exchanges Trading Hours (DTH) service provides timely and accurate information on trading hours, non-trading days and settlement details.

A Derivative is a financial Instrument and is a contract between two parties, the value of derivatives is determined by fluctuations in the underlying asset.

In Derivatives, we cover both futures contract and options contracts. A futures contract is a standardized agreement between two parties committing one to buy and the other to sell a particular asset of specific quantity and at a redetermined price, at a specified date in future. An options contract is a standardized agreement that gives the buyer the right but not the obligation to buy or sell a specific underlying asset or future of a specified quantity at or by a specific date in the futures.

Types of Derivatives:

- Commodity Derivatives
- Equity Derivatives
- FX Derivatives
- Interest Rate Derivatives

**Commodity Derivatives:** Commodity Derivatives are products where commodities are contracted to buy or sell at an agreed price for delivery at a specified date. Commodities include energy products, agricultural products, soft commodities, and metals.

**Equity Derivatives:** Equity Derivatives are products whose value is at least partly derived from one or more underlying equity asset classes. Equity derivatives also include futures and options based on index products or dividends. Futures and Options are the most traded equity derivatives.

**Foreign Exchange Derivatives:** Foreign Exchange

Derivatives or currency futures contract is an agreement between two parties to deliver a set amount of currency at a fixed future date, called the expiry. In some cases, the contract is settled by cash payment based on an index price or other known commodity pricing mechanism.

**Interest Rate Derivatives:** Interest rate derivatives are futures and options whose underlying is an asset related to interest rates including short term interest rate index contracts, fixed income contracts, and interest rate swap contracts.

## Customization

EDI is proud to offer the most effective and efficient solutions tailored to meet each individual customer's needs. We offer a range of customization options including:

- Delivery-based solutions to complement existing client infrastructure.
- Content delivered at the geographical or portfolio holding level.
- Feeds delivered in various formats, field content and integrated client level data items.

EDI uses its extensive data research expertise to source, scrub and integrate new client specified data items with existing products and services. For instance, a request from a multinational investment bank to source the DR universe and map it against its underlying share portfolio ultimately led to the development of EDI's successful Depositary Receipt Database.

In addition, EDI was the first vendor to successfully launch an ISO 15022 Corporate Action Messaging feed. This enables customers to reduce costs and increase efficiency by removing the need for multiple feed handlers.
