Interest Rates

To complement our economic datasets, EDI recently added the Interest Rate (iRate) dataset which is a must have for the financial sector. Interest rates influence borrowing costs and spending decisions of households and businesses. Rising or declining interest rates can adjust a company's strategy and outlook by changing the types of loans and amounts of money a company may potentially borrow, while also affecting things such as the valuation of securities currently held by the company, any future investment ventures and future cash flow forecasts.

Customization

EDI is proud to offer the most effective and efficient solutions tailored to meet each individual customer's needs. We offer a range of customization options including:

- Delivery-based solutions to complement existing client infrastructure.
- Content delivered at the geographical or portfolio holding level.
- Feeds delivered in various formats, field content and integrated client level data items.

EDI uses its extensive data research expertise to source, scrub and integrate new client specified data items with existing products and services. For instance, a request from a multinational investment bank to source the DR universe and map it against its underlying share portfolio ultimately led to the development of EDI's successful Depositary Receipt Database.

In addition, EDI was the first vendor to successfully launch an ISO 15022 Corporate Action Messaging feed. This enables customers to reduce costs and increase efficiency by removing the need for multiple feed handlers.
